

Install Guide

The following are steps to download and install as well as beginning running steps for the code.

1. Download the ZIP of the codes

2. Place the code into the desired directory and unzip it.
3. Install anaconda or miniconda with python version 3.X. This is necessary as some modules needed are easier to install with miniconda. The required modules are:
 - a. Numpy (conda install numpy)
 - b. Pandas (conda install pandas)
 - c. OpenBabel (conda install -c conda-forge openbabel)
 - d. Scikit-Learn (conda install scikit-learn)
4. Run with the appropriate privileges for the account, run the install.sh file.
 - a. This will make a .defaults/ directory and place files into it
 - b. Make the appropriate files executable
5. The program should be able to be run.
